

Clinical Informatics Leadership

Anne Cooper

National Clinical Lead for Nursing

Department of Health Informatics Directorate

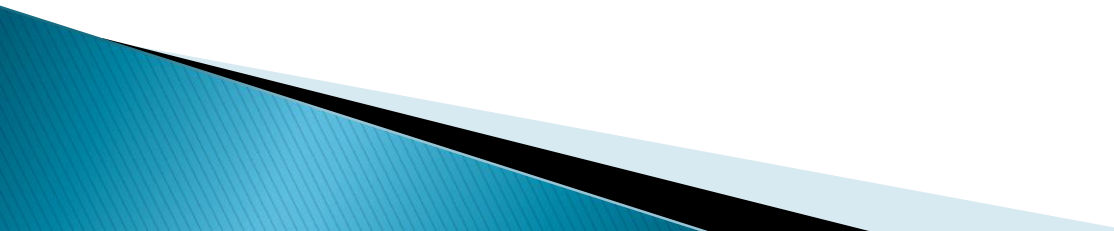

Anne.cooper@nhs.net

The technology
enabled health and
social care
professional

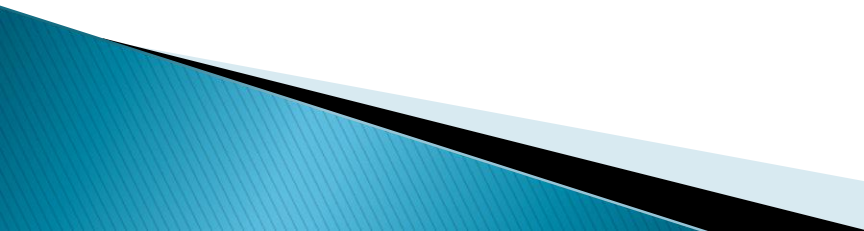

A changing landscape

- ▶ Organisational changes+++++
 - ▶ Workforce demographics
 - ▶ QIPP (drive for efficiency/effectiveness/quality)
 - ▶ Patient Safety
 - ▶ Policy emphasis
- 

A changing clinical informatics landscape

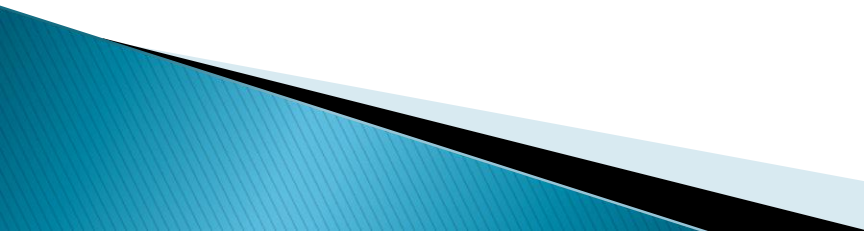

- ▶ Information sharing
 - ▶ Communication technologies
 - ▶ Patient access to information
 - ▶ Information governance
 - ▶ Invisible to visible (transparency)
 - ▶ Clinical safety of new information technologies
 - ▶ Clinical content and content management
 - ▶ Clinical informatics leadership
- 

Intelligent customer? How far have we come?

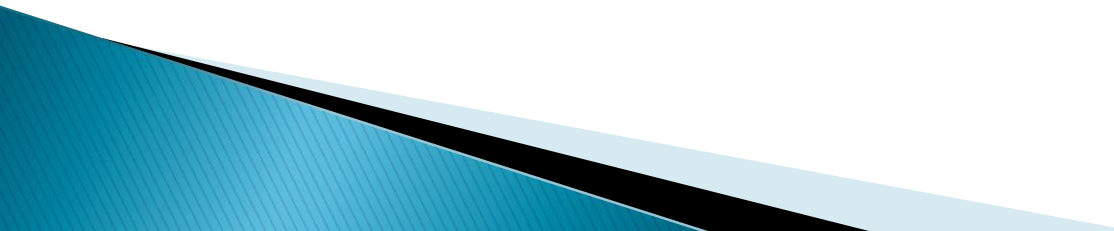

- ▶ Are all nurses slow to adopt and innovate?
 - ▶ Why is the product choice so poor?
 - ▶ Are we developing the skills in our workforce and increasing our expectations?
 - ▶ Could information governance get any more boring yet be so important?
 - ▶ When did patient safety become an IT issue not a clinical one?
 - ▶ Are we prepared for being visible?
- 

The strategic leadership challenge

Need to enable our next generation of nurse leaders;

- ▶ to develop their vision of how clinical informatics will develop practice.
 - ▶ to have a broader perspective of a changed landscape
 - ▶ to step back and see the bigger picture
 - ▶ to be more comfortable in thinking differently.
- 

National Clinical Lead for LDN

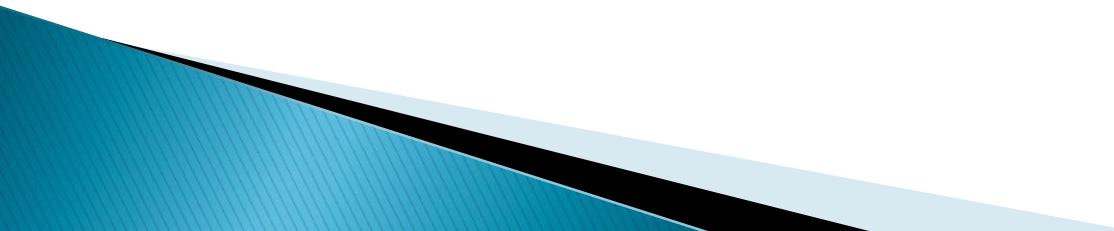

- ▶ Jane Smith
 - ▶ jane.smith43@nhs.net
 - ▶ Recognition of what LDN can share with the wider system
- 

Leadership for informed practice

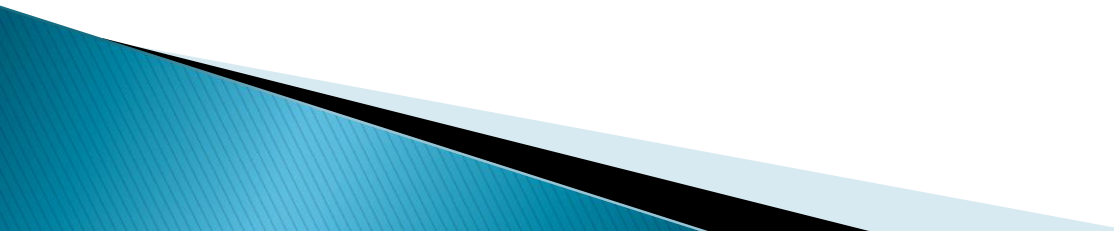

A system wide intervention.

Strategic Leadership Programme

- ▶ Adult learning strategies
 - ▶ Scanning; visioning; reframing; making common sense; systems thinking.
 - ▶ Three days approximately one week apart
 - ▶ Material designed to share
 - ▶ Support through E coaching and follow up events
- 

Content

- ▶ Day one: how technology disrupts; new skills needed for different relationships with patients (navigation); review leadership approach; change what change?
 - ▶ Day two: power of information; clinical content and its importance for practice; “meaningful use of data”; transparency.
 - ▶ Day three: information governance revisited; workforce development; next leadership steps.
- 

The potential

- ▶ Increase pool of senior leaders able to support IT enabled organisational change.
 - ▶ Increased and accelerated adoption of key products both local and national to support QIPP goals eg electronic prescribing, choose and book, SCR.
 - ▶ Reduced service variation and associated efficiency gains.
 - ▶ Earlier recognition of patient/user associated issues and opportunities for IT supported redesign. (eg Midwives and digital pens)
 - ▶ Better product design and commitment to incremental innovation.
 - ▶ Improved workforce skills development.
-
